

Redox Systems Under Nano-Space Control

By -

Springer. Hardcover. Book Condition: New. Hardcover. 292 pages. Dimensions: 9.1in. x 6.3in. x 0.6in. 3. 1 -Conjugated Materials -conjugated polymers (CPs) and oligomers are materials with an extended -system along the backbone. The materials possess many remarkable prop- ties, including high charge carrier mobilities, electrical conductivities (doped), electrochromism, and electroluminescence 1. These properties have been taken advantage of in exploration of potential applications including in ch- ical sensors, light-emitting devices, and eld-effect transistors. Many efforts have been devoted to synthesizing new conjugated polymers and oligomers in an effort to increase their processibility, optimize the desirable properties, and explore new properties. In Fig. 3. 1 are shown examples of some of the CPs that have been prepared and studied. Coupling -conjugated materials to metal complexes gives hybrid mate- als in which the properties of the metal complex may be coupled to those of the conjugated backbone 2. For example, these materials could be used in energy-harvesting devices such as solar cells or polymer-based light-emitting devices, wherehighchargecarrier mobilities of theconjugatedmaterialmay be combined with either the light-absorbing or emitting metal groups, giving improved device performance 3, 4. In addition to an electronic role, metal complexes may also be used to geometrically orient -conjugated...

Reviews

Extremely helpful for all class of people. We have read through and that i am confident that i am going to going to read through again again down the road. Its been designed in an exceedingly basic way in fact it is simply following i finished reading this pdf in which in fact altered me, alter the way i think.

-- Noel Stanton

Absolutely one of the best pdf We have ever read. I really could comprehended every little thing using this written e book. I am easily could get a satisfaction of reading a written publication.

-- Dr. Odie Hamill
